Bureau of Agricultural Economics. Official sources and International Institute of Agriculture. Estimates given are for crops harvested during the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

1 Where changes in boundary have occurred, averages are estimated for territory within present boundaries.

2 1 year only.

3 4 year average.

4 The estimate for the 5-year period, 1909-1913, given in this table is somewhat larger than the figure obtained by averaging the same 5 years in Table 82. This is because in this table estimates for warring countries are for post-war boundaries, whereas in Table 82 they are for pre-war territory. As a result, in excluding Russia, which lost territory during the war, a smaller area is excluded in this table than in Table 82.

5 Excludes native locations which produced 38,550 bushels in 1917-18 and 29,056 bushels in 1920-21.

TABLE 82.—*Barley: World production, 1894-1929*

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture. For each year is shown the production during the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Includes all Russian territory reporting for the years shown.

² Total Russian Empire exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.

³ Exclusive of Russian Poland, Lithuania, parts of present Latvia and the Ukraine, and two Provinces of Transcaucasia.

⁴ Beginning this year estimates within present boundaries of the Union of Socialist Soviet Republics excluding Turkestan, Transcaucasia, and the Far East, which regions in 1924 produced 20,897,000 bushels.

⁵ Postwar boundaries beginning this year and therefore not comparable with earlier years.

⁶ Beginning this year weighed bushels, those reported for the earlier years being measured bushels.

⁷ Preliminary.

Bureau of Agricultural Economics. Compiled from weekly reports to the Grain, Hay and Feed Market News Service. Data are for stocks on the Saturday nearest the 1st day of the month.

¹ Includes barley in store in public and private elevators in 39 important markets and also barley afloat in vessels or barges in harbors of lake and seaboard ports. Barley in transit either by rail or water, mill stocks, or small private stocks of barley intended only for local purposes, not included.

² Includes barley stored at lake and seaboard ports, exclusive of barley in transit on lakes and canals.

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board; italic figures are census returns. See 1927 Yearbook, page 809, for data for earlier years.

¹ The figures shown, 1909-1920, are averages of daily closing prices compiled from annual reports of the Minneapolis Chamber of Commerce; 1921-1928, are averages of daily prices weighted by car-lot sales, compiled from Minneapolis Daily Market Record.

² Compiled from Commerce and Navigation of the United States, 1909-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June, July, and August issues, 1919-1929, January issues, 1927-1929, and official records of the Bureau of Foreign and Domestic Commerce. 1 bushel of flaxseed weighs 56 pounds; 1 bushel of seed yields 2½ gallons of oil; and 1 gallon of oil weighs 7½ pounds.

³ Production minus net exports or plus net imports.

⁴ Preliminary.

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture. Estimates given are for crops harvested during the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

1 Where changes in territory have occurred averages are estimates for territory within present boundaries.

2 Flax and hemp.

3 3-year average.

4 4-year average.

5 2-year average.

6 1 year only, 1910.

7 Average 1915-1918.

8 1 year only, 1912.

9 Acreage figures are for area sown; figures of area harvested are not available for all years but over a 16-year period the harvested area averaged 10 per cent below the sown area.

10 Excludes a few minor producing countries for which no statistics are available and which do not enter into world trade. No figures are included for Germany, whose acreage in 1913 was 37,800 acres and has now fallen from 113,000 acres in 1921 to 86,000 acres in 1928. No production figures are available.

Bureau of Agricultural Economics. Compiled from weekly reports to the Grain, Hay, and Feed Market News Service. Data are for stocks on the Saturday nearest the 1st day of the month.

¹ Includes flaxseed in store in public and private elevators in 39 important markets and also the flaxseed afloat in vessels or barges in the harbors of lake and seaboard ports. Flaxseed in transit either by rail or water, mill stocks, or small private stocks of flaxseed intended only for local purposes, not included.

² Includes flaxseed stored at lake and seaboard ports, exclusive of flaxseed in transit on lakes and canals.

Bureau of Agricultural Economics. The figures for each year include the crop harvested in the Northern Hemisphere within the calendar year and the following harvest in the Southern Hemisphere. Estimates of world rice production for the period 1900-1909 appear in *Agriculture Yearbook, 1924*, p. 653.

¹ China is an important producing country, but official statistics are not available.² Irrigated rice.³ Estimated figures obtained by multiplying acreage under rice as classified for revenue purposes up to 1912, and acreage as reported by the Department of Land and Agriculture from 1912 on by an average yield for the years 1920-1923, for which years official estimates have been published of acreage, yield, and total production.⁴ Preliminary.

Bureau of Agricultural Economics. Official sources except where otherwise noted. Mostly cleaned rice. Under rice is included paddy, unhulled, rough, cleaned, polished, broken, and cargo rice, in addition to rice flour and meal. Rice bran is not included. Rough rice, or paddy, where specifically reported, has been reduced to terms of cleaned rice at the ratio of 162 pounds of rough or unhulled to 100 pounds of cleaned. "Rice, other than whole or cleaned rice," in the returns of the United Kingdom is not considered paddy, since the chief sources of supply indicate that it is practically all hulled rice. Cargo rice, a mixture of hulled and unhulled, is included without being reduced to terms of cleaned. Broken rice and rice flour and meal, are taken without being reduced to terms of whole cleaned rice.

¹ Fiscal year Apr. 1-Mar. 31.

² International Yearbook of Agricultural Statistics.

³ Java and Madura only.

⁴ 2-year average.

⁵ Average for Austria-Hungary.

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board; italic figures are census returns. See 1927 Yearbook, page 825, for data for earlier years.

¹ Compiled from Commerce and Navigation of the United States, 1909-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1926; January and June issues, 1927-1929 and official records of the Bureau of Foreign and Domestic Commerce. Buck wheat and buck wheat flour—Imports for consumption, 1909-1929. Buck wheat flour converted to terms of grain on the basis that 1 barrel of flour is the product of 7 bushels of grain.

² The difference between total exports (domestic exports plus reexports) and total imports. Net exports indicated by +; net imports indicated by -.

³ Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices weighted by production of buckwheat for each State; yearly price obtained by weighting monthly prices by average monthly marketings. Mean of prices reported on 1st of month and 1st of succeeding month, September, 1909-December, 1923.

¹ 500-pound gross weight bales, from 1890–1927.

² Compiled from Cotton Fluctuation, 1849–1888, and are averages for crop year beginning September. From New York Commercial and Financial Chronicle, 1889–1890, and from reports of New York Cotton Exchange since 1900. Since 1889 the averages are for crop year beginning August.

³ Excluding linters from 1914 to 1929.

⁴ Compiled from Commerce and Navigation of the United States, 1849–1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June and July, 1919–1929, and January 1927 and 1929.

⁵ Bales of 500 pounds gross weight.

⁶ Bales of 478 pounds net, which are equivalent to bales of 500 pounds gross weight.

⁷ Total exports (domestic plus foreign) minus imports.

⁸ Year beginning July 1.

⁹ Estimated from value of imports. Average import price per pound calculated by assuming that the percentage change in import price from the previous year is equal to the percentage change in the export prices.

Bureau of Agricultural Economics; italic figures are census returns; other acreage, yield, and production figures are estimates by the crop-reporting board; acreage revised on census basis.

¹⁰ Average for nine months only. Exchange closed August-Nov. 17, on account of war.

¹¹ Cotton ginned in the United States. Prior census reports include undetermined quantities Lower California cotton ginned in the United States. In later years no Lower California cotton ginned in the United States.

¹² Preliminary.

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture. Data for crop year as given at the head of the table are for crops harvested between Aug. 1 and July 31 of the following year. This applies to both Northern and Southern Hemispheres. For the United States prior to 1914 the figures apply to the harvest year beginning Sept. 1.

¹ Average for 3 years.² Average 1914-15 to 1918-19.

Bureau of Agricultural Economics. Compiled from Bureau of Census Reports. Linters are excluded. Quantities are in running bales, round bales counted as half bales and foreign in 500-pound bales.

¹Total distribution usually is greater than total supply due principally to the inclusion, in all distribution items, of the "city crop," which consists of rebaled samples and pickings from cotton damaged by fire and weather.

Bureau of Agricultural Economics. Official sources except where otherwise noted. Bales of 500 pounds gross weight or 478 pounds net. The figures for cotton refer to ginned and unginned cotton and linters, but not mill waste, cotton batting, scarto (Egyptian and Sudan). Wherever unginned cotton has been separately stated in the original reports it has been reduced to ginned cotton in this statement at the ratio of 3 pounds unginned to 1 pound ginned. Wherever linters are stated separately, they have been excluded from these figures.

¹ Year ended Dec. 31.

² 3-year average.

³ Average for Austria-Hungary.

⁴ International Crop Report and Agricultural Statistics.

Bureau of Agricultural Economics. Based upon returns from special price reporters. Monthly prices weighted by production of cotton for each State; yearly price obtained by weighting monthly prices by bales marketed monthly. Mean of prices reported on 1st of month and 1st of succeeding month, August, 1909-December, 1923.

Bureau of Agricultural Economics. Prior to Aug. 16, 1915, compiled from quotations in Market Reports of the New York Cotton Exchange, except Sept. 23 to Nov. 16, 1914, when the exchange was closed, quotations for which time were taken from the New York Commercial and Financial Chronicle, from Aug. 16, 1915, compiled from daily reports to the bureau from the cotton exchanges of the various markets. Prices 1900-1908 for New Orleans and 1914-1926 for other markets are available in 1924 Yearbook, p. 756, Table 313, p. 757, Table 314, and 1927 Yearbook, Table 254, p. 920.

¹ Market closed.

² No quotations prior to Sept. 23. Average for 7 days' business.

³ Does not include New Orleans.

⁴ Does not include Savannah.

Bureau of Agricultural Economics.

¹ White Standards.² Based on $\frac{3}{16}$ -inch staple.³ These grades are not deliverable on future contracts.⁴ The differences are stated in terms of points or hundredths of a cent per pound. By "On" is meant that the stated number of points is to be added to the price of middling and by "Off" is meant that the stated number of points is to be subtracted from the price of middling.

Bureau of Agricultural Economics. Prices 1909-1912 and 1919-1928 are averages of weekly quotations in the Oil, Paint, and Drug Reporter; 1913-1918 from War Industries Board Price Bulletin No. 15. Beginning August, 1928, prices are average of daily quotations.

¹ Quoted as follows: Prior to 1922 as f. o. b. mills; 1922, southeastern, pounds; 1923-1927, southeastern, tanks; beginning August, 1928, immediate southeastern.

Bureau of Agricultural Economics. Estimates of the crop-reporting board.

¹ Figures for important States in recent years published in *Crops and Markets*, December, 1929, p. 475.² Year shown is that in which beets were grown. Sugar-making campaign extends into succeeding year.³ Including, in some years, a small acreage in Canada used by U. S. factories.⁴ Percentages of sucrose (pure sugar) in the total soluble solids of the beets.⁵ Based upon weight of beets sliced, except possibly in a very few factories.⁶ Sucrose actually extracted by/ factories (as percentage of weight of beets).⁷ Preliminary.

Bureau of Agricultural Economics. Cane sugar production 1909–1910 from Willett & Gray; 1911 and subsequently from United States Department of Agriculture. Hawaiian production from Hawaiian Sugar Planters' Association. Figures for earlier years appear in previous issues of the Yearbook.

¹ Cane sugar, raw, converted to refined basis by multiplying by the following factors: Louisiana and other States, 0.932; Porto Rico, 0.9393; Hawaii, 0.9358; Philippine Islands, 0.95.

² Exports 1909–1911, production 1912 and subsequently.

³ Unofficial estimate of commercial crop.

⁴ Unofficial.

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture except as otherwise stated. Figures are for the crop years 1909-10 to 1929-30 for the countries in which the sugar-harvesting season begins in the fall months and is completed during the following calendar year, except in certain cane-sugar producing countries where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1909 to 1929.

¹ Unofficial estimate.

² 2-year average.

³ Exclusive of production in minor producing countries for which no data are available.

⁴ 3-year average.

⁵ Too small to report.

¹¹ The figures quoted for India are for the production of gur, a low grade of sugar polarizing between 50° and 60°. This sugar is mostly consumed by the natives.

¹² All grades of sugar reduced to terms of head sugar, a grade of sugar which contains at least 96.5 per cent of sucrose.

¹³ Figures for the total crop are not yet available. Trade reports place the 1928-29 commercial crop at 830,000 short tons and that of 1929-30 at 840,000 short tons.

Bureau of Agricultural Economics. Trade figures compiled from Commerce and Navigation of the United States, 1909-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1926, January and June issues, 1927-29, and official records of the Bureau of Foreign and Domestic Commerce.

¹ Beet and cane sugar only.

² Duty free, from Hawaii, Porto Rico, the Philippine Islands, and from the Virgin Islands since 1916.

³ No account taken of sugar imported in other forms. Imports from the Philippine Islands excluded, reexports deducted.

⁴ Shipments to Hawaii and Porto Rico included. Direct exports to foreign countries from Hawaii and Porto Rico excluded.

⁵ Sugar used in the manufacture of other commodities for export on which drawback was paid.

⁶ No account taken of stocks at the beginning or end of year.

⁷ Not available.

⁸ Raw sugar converted to refined by multiplying by the following factors: Cuba and Hawaii, 0.9358; Porto Rico, 0.9393; Philippines, 0.95; all others (Santo Domingo, British West Indies, Louisiana, etc.), 0.932.

Bureau of Agricultural Economics. Estimated world total sugar production for the period 1895-96 to 1908-09 in *Agricultural Yearbook*, 1924, p. 808.

¹ Figures are for the crop years 1909-10 to 1929-30 for the countries in which the sugar production season begins in the fall months and is completed during the following calendar year except in the cane-sugar producing countries where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1909 to 1929.

² Production of cane and beet sugar in terms of raw sugar.

³ The figures quoted are the production of gur, a low grade of sugar polarizing between 50° and 60°.

⁴ All grades of sugar reduced to terms of head sugar, a grade of sugar which contains at least 96.5 per cent sucrose.

⁵ Figures for 1909-10 to 1917-18 are for pre-war boundaries.

⁶ Bohemia, Moravia, and Silesia only.

⁷ Unofficial estimate.

Bureau of Agricultural Economics.

¹ The data from 1917-1923 include 11 States: Maine, New Hampshire, Vermont, Massachusetts, Connecticut, New York, Pennsylvania, Ohio, Indiana, Michigan, and Wisconsin; data for 10 States, excluding Connecticut, are shown for 1924 and 1925; 9 States, excluding Indiana, for which data are shown from 1926-1929, produced about 97 per cent of the maple sugar and about 92 per cent of the maple sirup in the United States in 1919 as reported by the Bureau of the Census.

² 1 gallon of sirup taken as equivalent to 8 pounds of sugar.

| Estimated world total exclusive of India and China ⁸ | — | — | — | — | — | — | 3,670,000 | — | — |

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture except as otherwise stated. Figures refer to the crop harvested in the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere except in the Dutch East Indies, where the harvest is largely completed within the calendar year.

¹ Unofficial estimate.

² Unofficial estimate of the export crop.

³ Annam and Cochin-China only. In addition in 1927: Cambodia, 7,544,141 pounds and 8,000 acres; Tonking, 4,542 acres; Laos, 1,228,000 pounds. In 1928: Tonking, 3,400 acres; Laos, 414,000 pounds.

⁴ European cultivation only.

⁵ Estate production only. Figures for native production not available. Total production of the islands is roughly estimated, on the basis of average yield of 311 pounds per acre for the native area, with the addition of the estate production, at 185,000,000 pounds in 1927 and 205,000,000 pounds in 1928.

⁶ Estate production only.

⁷ Exclusive of Victoria with an area of 1,176 acres.

⁸ No data are available for the total production for India prior to 1928 or for China. Both are of considerable importance.

STATISTICS OF COTTON, SUGAR, AND TOBACCO

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board; Italian figures are census returns. Prices to producers are based upon returns from crop reporters.

¹ For years 1920-1922, it is assumed that the car lots averaged 600 bushels per car. For years 1923 to 1928 inclusive, the estimates of bushels shipped have been calculated according to estimated loadings in each State.

² Compiled from Commerce and Navigation of the United States, 1890-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1926; January and June issues 1927-1929 and official records of the Bureau of Foreign and Domestic Commerce.

³ Total exports (domestic plus foreign) minus imports.

⁴ Figures 1889-1922 from Boston Chamber of Commerce reports, average of weekly quotations of price actually paid by wholesale dealers on days quoted. Figures 1924-1928 from Special Apple Market Report issued by Mass. Dept. of Agr., Div. of Markets, based on prices "for sales by original receivers."

⁵ Preliminary.

⁶ December forecast of total shipments from 1929 crop.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis. See preceding Yearbooks for data for earlier years.

¹ Crop movement season extends from June 1 of 1 year through June of the following year.

Bureau of Agricultural Economics. Compiled from reports from cold-storage establishments.

¹ All apples, except those packed in western-style boxes, are tabulated in terms of barrels, on the basis of 3 bushels to the barrel; since Oct. 1, 1923, apples packed in bushel baskets are also included in this tabulation. Three boxes are considered the equivalent of 1 barrel.

Bureau of Agricultural Economics. Compiled from daily market reports from bureau representatives at these markets. Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. See 1927 year book, p. 837, for data for 1921-1926.

¹ Commodity reports began Aug. 29, 1927 and 1928; Sept. 3, 1929. Last commodity report of season May 28, 1927; May 26, 1928; May 25, 1929.

² Quotations on 2½ inch stock unless otherwise stated.

³ Less than ten quotations.

⁴ Quotations on medium-large stock unless otherwise stated.

⁵ Quotations include very large stock.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹Include tangerines.

²Crop movement season extends as follows: Oranges, from Sept. 1 of one year through August of the following year, except in California, where the season extends from Nov. 1 through October of the following year; grapefruit, from Sept. 1 of one year through August of the following year; lemons, from Nov. 1 of one year through October of the following year; mixed citrus, from Sept. 1 of one year through August of the following year, except in California, where the season extends from Nov. 1 through October of the following year.

³Preliminary.

⁴Includes one car in August, 1921.

⁵Reported in October, 1924.

⁶No reports available before 1922.

Bureau of Agricultural Economics.

¹ The figures in this table of production include fruit consumed on farms, sold locally, and used for manufacturing purposes, as well as that shipped. The figures do not include fruit which ripened on the trees, but which was destroyed by freezing or storms prior to picking. For California the figures relate to the crop produced from the bloom of the year shown, fruiting through the winter and through the spring and summer of the following year, being picked from Nov. 1 of the year shown to Oct. 31 of the following year. Fruit not picked until after the latter date is included with the crop of the following year. For all States except California the estimates include all fruit picked after about Sept. 1 of the year shown. The estimates for oranges include tangerines.

² From prospects on Dec. 1, commercial shipments of Florida citrus fruits from the 1929 crop were estimated at 8,500,000 boxes of oranges, and 5,500,000 boxes of grapefruit, compared with 13,900,000 boxes of oranges and 9,300,000 boxes of grapefruit shipped from the 1928 crop.

³ For years 1919-1929, equivalent in standard boxes, each equal to about 2 of the "half straps" commonly used.

⁴ Census. Size of boxes not specified.

⁵ 500 boxes or less.

⁶ As estimated from prospects on Dec. 1.

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board. Prices are based upon returns from crop reporters.

¹ For years 1925-1929, the average price for the States reporting price, except California, is used for computing the value of the grape crop in the less important States for which no price is determined. Price and value are based on quantities actually harvested.

² Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1923-1926; January and June issues, 1927-1929.

³ Total exports (domestic plus foreign) minus total imports.

⁴ Net imports equals total imports minus total exports (domestic plus foreign).

⁵ Less than 0.05 per cent.

⁶ Includes some quantities not harvested in California as follows: 138,000 tons in 1925, 15,000 in 1926, 142,000 in 1927, and 153,000 in 1928.

⁷ Preliminary.

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board; italic figures are census returns. Prices based upon returns from crop reporters.

¹ Dried peaches converted to terms of fresh on the basis that dried peaches equal 19 per cent of fresh. Canned peaches converted to terms of fresh on the basis that 25 pounds of fresh equal 1 dozen cans of 1 pound each; 48 pounds fresh equals 1 bushel. In practice, 1 bushel of fresh fruit is figured as the equivalent of 2 dozen cans of 1 pound each.

² From 1918 to 1922, Sept. 15 price; 1923-1925, Sept. 15 price in North, Aug. 15 price in South; 1926-1929, approximate average price for the season, as reported Dec. 1.

³ Canned peaches were reported in value only prior to July 1, 1922.

⁴ No exports reported prior to Jan. 1, 1922. Figures for 1921 represent exports Jan. 1, 1922, to June 30, 1922.

⁵ For quantities not harvested in 1926, 1927, and 1928 see Table 203.

⁶ Preliminary.

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board. Prices are based upon returns from crop reporters.

¹ From 1923-1925, Sept. 15 price in North, Aug. 15 price in South; 1926-1929 approximate average price for the season as reported Dec. 1.

² Preliminary.

³ The production of peaches shown above includes some estimated quantities not harvested or not utilized, as follows: 1926, 1,462,000 bushels in Georgia and Northern States; 1927, 2,708,000 bushels in California; 1928, 2,917,000 bushels in California and 1,000,000 bushels in Georgia. Values are based on the quantity actually harvested.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis. See 1927 Yearbook, page 855, for data for earlier years.

¹ Crop movement season extends from May 1 through October of a given year.

² Preliminary.

³ Includes 1 car in November.

⁴ Includes 5 cars in November.

Bureau of Agricultural Economics. Production figures are estimates of the crop-reporting board; Italian figures are census returns. Prices are based upon returns from crop reporters.

¹ Canned pears converted to terms of fresh on the basis that 1 pound canned fruit is equivalent to 2 pounds fresh; 48 pounds fresh equals 1 bushel. No imports of pears reported.

² From 1918 to 1925, Nov. 15 price; 1926 to 1929, approximate average price for the season, as reported Dec. 1.

³ Exports were reported in value only, prior to July 1, 1922.

⁴ Preliminary.

Bureau of Agricultural Economics. Compiled from daily market reports from bureau representatives in the various markets. Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa in order to obtain comparability.

¹ Commodity reports began Apr. 7, 1919; Apr. 12, 1920; Mar. 17, 1921; Mar. 23, 1922; Mar. 28, 1923; Mar. 31, 1924; Mar. 19, 1925; Mar. 29, 1926; Mar. 7, 1927; Feb. 27, 1928; Apr. 1, 1929. (Quotations from March, 1929, taken from miscellaneous reports.)

² Last reported quotations for season June 20, 1919; June 10, 1920; June 3, 1921; June 6, 1922; June 13, 1923; June 17, 1924; June 9, 1925; June 19, 1926; June 20, 1927; June 12, 1928; June 7, 1929.

¹ To calculate the production of apricots and plums in bushels, multiply the production in tons by 2,000 (the number of pounds in a ton) and divide by 48, the usual number of pounds in a bushel.² Dried basis. To calculate in terms of fresh fruit multiply the quantity of dried prunes produced by 2½.³ The production shown includes a small quantity of prune varieties shipped fresh, but does not include prunes dried.⁴ The totals shown for California include 138,000 tons not harvested in 1925; 15,000 tons not harvested in 1926; 142,000 tons not harvested in 1927; and 153,000 tons not harvested in 1928. The grapes not harvested were of table varieties, except 60,000 tons of raisin grapes and 18,000 tons of wine grapes in 1928. The values shown are based on the quantity harvested.⁵ Dried basis. To calculate the approximate quantity of fresh grapes used for raisins multiply the production of raisins by 4.

Bureau of Agricultural Economics: California estimates in cooperation with California Department of Agriculture; 1929 estimates are preliminary.

⁶ For years prior to 1923 the quantity of raisins marketed fresh was small and has been included with other table grapes.

⁷ Representing the commercial crop year beginning Nov. 1 of the year shown; the numbers for 1929, for instance, represent the fruit that set during the season of 1929 and will be picked and marketed from Nov. 1, 1929, to Oct. 31, 1930.

⁸ Includes value of quantity of grapefruit as shown below.

⁹ Total production includes 66,000 tons not harvested in 1927 and 70,000 tons not harvested in 1928. The values shown are based upon the quantities harvested.

STATISTICS OF FRUITS AND VEGETABLES

745

TABLE 215.—Pecans: Estimated production ¹ and value, by States, 1925-1929

Bureau of Agricultural Economics. Compiled from daily market reports from bureau representatives in the various markets. Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa in order to obtain comparability.

¹ Unless otherwise stated, quotations are on bulk per ton sales.

² The season during which Danish cabbage prices are obtainable usually runs from October to March of the following year.

³ Sacked per ton delivered.

⁴ Converted from hundredweight price.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Includes honeysuckles and other miscellaneous melons not separately reported until 1923. The shipments of melons, other than cantaloupes, amounted in 1923 to 1,152 cars; in 1924 to 2,565; in 1925 to 3,654; in 1926 to 6,484; in 1927 to 6,516; in 1928 to 9,719; and in 1929 to 11,807.

² Crop-movement season extends from Apr. 1 through November of a given year.

³ Preliminary.

⁴ Figures for California include shipments in December as follows: 1920, 1 car; 1925, 18 cars; 1926, 3 cars; 1927, 4 cars; 1928, 2 cars.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Crop-movement season extends from July 1 through June of the following year.

² Preliminary.

³ Totals include figures in June of preceding crop year as follows: 1925, 1 car; 1928, 1 car.

⁴ Totals include figures in succeeding crop year as follows: 1921, 4 cars in August and 7 in September; 1922, 7 cars in July, 5 in August, and 8 in September; 1924, 4 cars in July; 1927, 1 car in July.

⁵ Includes 2 cars in July, 1926, from Virginia.

⁶ Includes 1 car in May and 6 in June, 1926, from Washington.

⁷ Includes 12 cars in June, 1927, from Washington.

Bureau of Agricultural Economics. Compiled from daily market reports from bureau representatives in the various markets.

Average prices as shown are based on stock of U. S. No. 1 grade; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

¹ Quotations began Aug. 23, 1920; Aug. 22, 1921; Aug. 7, 1922; Aug. 22, 1924; July 22, 1925.

² Last reported quotations of season June 30, 1920; June 11, 1921; June 14, 1922; May 29, 1923; June 4, 1924; June 10, 1925; for subsequent years onion reports have run through the entire year.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Crop movement season is for calendar year except for Imperial Valley California, Florida, and Texas which begins in October of the preceding year.

² Preliminary.

³ Figures for certain States include shipments in preceding year as follows: California, 1926, 4 cars in October, 220 in November, and 94 in December; 1927, 1 car in October, 223 in November, and 38 in December; 1928, 202 cars in November and 92 in December; 1929, 259 cars in November and 148 in December. Florida, 1927, 2 cars in December; 1928, 5 cars in November and 4 in December; 1929, 1 car in December. Texas, 1927, 1 car in December; 1928, 1 car in November.

Bureau of Agricultural Economics. Acreage, yield, and production figures are estimates of the crop-reporting board; italic figures are census returns. Prices received by producers are based upon returns from crop reporters. See 1927 Yearbook, p. 881, for data for earlier years.

¹ Compiled from Producers Price Current. Prices 1909-1919 are averages of the high and low weekly quotations of New York potatoes, October-June, converted from dollars per 180 pounds to cents per bushel beginning 1920, season September-May.

² Compiled from Commerce and Navigation of the United States, 1909-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1926, January and June issues, 1927-1929 and official records of the Bureau of Foreign and Domestic Commerce.

³ The difference between total exports (domestic exports plus reexports) and total imports; + indicates net exports and - indicates net imports.

⁴ Preliminary.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis. Figures for earlier years appear in 1927 and earlier Yearbooks.

¹ Preliminary.

² Includes 6 cars in February and 705 in March.

³ Includes 46 cars in January, 57 in February, and 276 in March.

⁴ Includes 5 cars in January, 40 in February and 1,282 in March.

Bureau of Agricultural Economics. Compiled from daily market reports from bureau representatives in the various markets. Average prices as shown are based on stock of U. S. No. 1 grade; they are simple averages of daily range of selling prices. In some cases conversions were made from larger to smaller units or vice versa, in order to obtain comparability.

¹ Crop movement season extends from April of one year through May of the following year, with irregular quotations continuing through June and July.

² Car-lot sales.

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis.

1 Crop-movement season extends from October of the preceding year through December of the year shown.

2 Preliminary.

3 Figures include shipments in January of succeeding crop year as follows: Maryland, 1922, 5 cars; 1923, 4 cars; Washington, 1925, 4 cars; New Jersey, 1923, 1 car.

4 Includes 1 car from New Mexico in March, 1921.

Bureau of Agricultural Economics. Compiled from daily market reports from bureau representatives in the various markets.

Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

¹ Commodity reports began Sept. 30, 1919, Aug. 23, 1920 and 1921, Sept. 1, 1922, Sept. 18, 1923, Sept. 2, 1924 Aug. 25, 1925, Aug. 16, 1926, Aug. 19, 1927, Aug. 22, 1928, Aug. 19, 1929.

² Last commodity report of season May 28, 1920, May 20, 1921 and 1922, May 4, 1923, Apr. 15, 1924, Apr. 3, 1925, Apr. 16, 1926, Apr. 19, 1927, Apr. 3, 1928, Apr. 5, 1929. Subsequent prices for 1927 taken from miscellaneous reports.

³ Kila-dried.

STATISTICS OF FRUITS AND VEGETABLES

Bureau of Agricultural Economics. Compiled from daily and monthly reports received by the bureau from officials and local agents of common carriers throughout the country. Shipments as shown in car lots include those by boat reduced to car-lot basis. See 1927 Yearbook, p. 901, for data for earlier years.

¹ Crop movement season extends from Apr. 1 through December of a given year.

² Preliminary.

³ Reported as shipped in January.

Bureau of Agricultural Economics.

¹ Crops grown for consumption, fresh: Asparagus, snap beans, cabbage, cantaloupes, carrots, cauliflowers, celery, cucumbers, eggplant, lettuce, onions, green peas, peppers, early Irish potatoes, spinach, strawberries, tomatoes, watermelons; and those grown for canning and manufacture: asparagus, snap beans, cabbage (kraut), sweet corn, cucumbers (pickles), green peas, pimientos (since 1926), spinach, tomatoes.

² Based upon average seasonal farm prices.

³ Consists of minor acreages of canning crops in various States.

STATISTICS OF FRUITS AND VEGETABLES

Bureau of Agricultural Economics. Italic figures are census returns; census figures include all States; other figures, estimates of crop-reporting board, principal producing States only.

¹ Table includes, besides the ordinary edible beans and Limas, the blackeye of California which is identical with the blackeyed pea of the South. Soybeans not included.

² Farm prices are as of Nov. 15, 1914-1924.

³ Prices 1899 and 1909 from Chicago Board of Trade annual reports, quotations for navy, good to choice; 1914-1928 from Daily Trade Bulletin, pea beans (quoted per 100 pounds; converted to bushels of 60 pounds.)

⁴ Imports and exports compiled from Commerce and Navigation of the United States, 1910-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-1926; January and June issues, 1927-1929; and official records of the Bureau of Foreign and Domestic Commerce.

⁵ Not separately reported prior to 1918.

⁶ 11 months.

⁷ Not separately reported.

⁸ Preliminary.

Bureau of Agricultural Economics. Based upon reports by growers on proportion of total production made up of each variety, supplemented by investigations of field statisticians.

¹ Table includes, besides the ordinary edible beans and Limas, the blackeye of California, which is identical with the blackeyed pea of the South. Soybeans not included.

² Limas include Baby Limas, 1928, 668; 1929, 700.

³ "Other" include Bayo; 1928, 20; 1929, 20.

⁴ Large white in New York is the marrow.

⁵ Including garden or seed beans: Idaho, 1928, 195; 1929, 291; and Wyoming, 1929, 72.

⁶ Including the production in North Carolina of "Other varieties": 1928, 9; 1929, 3; and in Kansas, 1928, 36; 1929, 140.

Bureau of Agricultural Economics. Estimates of the crop-reporting board.

¹ Including acres planted in corn reduced to equivalent solid acres as well as the acreage grown alone.² Including beans grazed or otherwise utilized as well as those gathered.³ Acres from which all or part of the beans grown were gathered.⁴ Total production (except hay) multiplied by price of gathered beans to give approximate total value.

STATISTICS OF MISCELLANEOUS CROPS

Bureau of Agricultural Economics. Estimates of the crop-reporting board.

¹ Including acres planted in corn reduced to equivalent solid acres as well as the acreage grown alone. Acreage cut for hay is included in table of legume hay.² Including peas grazed or otherwise utilized as well as those gathered.³ Acres from which all or part of the peas grown were gathered.⁴ Total production (except hay) multiplied by price of gathered peas to give approximate total value.

Bureau of Agricultural Economics. Estimates of the crop-reporting board.

¹ The figures refer to the yield and entire production of velvet beans in the hull and not merely to those gathered. The pods are gathered from one-fourth to one-third of the acreage and most of these are ground for feed, only enough being shelled to supply seed. A large proportion of the crop is grazed.

Bureau of Agricultural Economics.

¹ In June, 1923, about 30 per cent of the manufacturers reported idle account lack of working stocks.² Storage stocks reported by dealers include manufacturers' stocks held by dealers at country shipping points.³ Less than 100 tons.⁴ Oct. 1 estimate.⁵ For crop year, June 1-May 31.⁶ Includes waste and broomcorn destroyed by warehouse fire.

Bureau of Agricultural Economics. Estimates of the crop-reporting board.

¹ Including acres planted in corn reduced to equivalent solid acres as well as the acreage grown alone.

² Including peanuts grazed or otherwise utilized as well as those gathered.

³ Farm prices are as of Nov. 15, 1916-1923; Dec. 1, 1924-1929.

⁴ Average price weighted on total production.

⁵ Preliminary.

Bureau of Agricultural Economics. Compiled mainly from data of the Seed Laboratory, Bureau of Plant Industry.

¹ Imports of perennial and Italian ryegrass and hairy vetch up to and including 1917, and sweet clover for all years, are based on information furnished by United States Customs Service. All other figures represent imports of seed permitted entry under the Federal seed act (formerly designated the seed importation act).

² Less than 500 pounds.

³ Figures missing.

⁴ Data not compiled for 1927-1929.

Bureau of Agricultural Economics. Later, revised figures for 1923, 1929, and preliminary 1930 may be found in February, 1930, Crops and Markets.

¹ Prior to 1900 estimates for each 10-year period represent an index of annual changes applied to census as base on first report after census data were available. Figures 1900–1919 are tentative revised estimates of the Bureau of Agricultural Economics as first published in 1927 Yearbook.

² Obtained by subtracting the estimates of "milk cows on farms" shown in Table 438 from the estimates of "all cattle on farms" shown in this table.

³ Series for 1867–1899 are estimates as currently reported. Data for 1900–1925 are an old series adjusted on basis average relationship between the old and new series from 1926 to 1928. Old series was weighted averages of prices by age group; only and was shown in 1928 Yearbook. The conversion factor was .9466 (base is old series). Data for 1926–1929 are a new series, referred to above, of average values by age and sex classification weighted by numbers in each class.

⁴ Data for beef cattle on farms and elsewhere as of Jan. 1 estimated by the Bureau of Animal Industry. Prior to 1920 census figures were adjusted to a January 1 basis and to include all ages and all animals in towns villages and ranges, as well as on farms. For methods, see Department Circular 241. Revisions have been made by the Bureau of Animal Industry for 1900–1929 in line with revision of estimates of cattle on farms.

⁵ Italic figures for census years represent classification of cattle as follows: 1840 reported as "neat cattle," 1880 and 1890 exclude an estimated number of unenumerated cattle on ranges as follows: 1880, 3,750,022; 1890, 6,285,220. No estimate made prior to 1880. Figures for censuses prior to 1900 were nominally exclusive of calves, though some calves may have been included. 1900, 1910, and 1920 include calves. 1850–1890 exclude working oxen as follows: 1850, 1,700,744; 1890, 2,254,911; 1870, 1,319,371; 1880, 963,841; 1890, 1,117,494. Not separately reported after 1890. Census dates were June 1 from 1840 to 1900; April 15, 1910; January 1, 1920 and 1925.

⁶ Original estimate of the Bureau of Agricultural Economics.

⁷ Preliminary.

Bureau of Agricultural Economics. Estimates of the crop-reporting board. Later revised figures for 1928, 1929, and preliminary 1930 may be found in February, 1930, Crops and Markets.

¹ Sum of total value of subgroups (classified by age and sex), divided by total number and rounded to nearest dime for States. Division and United States averages not rounded. State figures are new weighted value series not comparable to State figures previously published.

² Preliminary.

Bureau of Agricultural Economics. Compiled from official sources and the International Institute of Agriculture unless otherwise stated.

¹ Average for 5-year period if available, otherwise for any year or years within this period except as otherwise stated. In countries, having changed boundaries, the pre-war figures are estimates for 1 year only of numbers within present boundaries. For the pre-war average the years immediately preceding the war have been used.

² Year 1902.

³ Census.

⁴ Incomplete.

⁵ Year 1918.

⁶ Year 1908.

⁷ Estimates reported as of December have been considered as of Jan. 1 of the following year, i. e., figures for number of cattle in France as of Dec. 31, 1925, have been put in the 1926 column.

⁸ This total includes interpolations for a few countries not reporting each year and rough estimates for some others.

⁹ Unofficial.

¹⁰ Buffaloes included.

¹¹ Year 1920.

¹² June, 1914.

¹³ In rural communities only.

¹⁴ September.

¹⁵ Year 1906.

¹⁶ Years 1916, 1923–1927 from Soviet Union Review, April, 1928. Years 1928 and 1929, Economic Life, Aug. 14, 1929, quoting Central Statistical Bureau.

¹⁷ Year 1916.

¹⁸ Year 1915.

¹⁹ Number in towns assumed to be same as in 1927, i. e., 177,000 and added in for purposes of comparison with preceding years.

²⁰ In addition there were 832,163 buffaloes in pre-war times, 552,596 in 1926 and 794,595 in 1927.

²¹ Comparable totals for number of countries indicated.

*Bureau of Agricultural Economics. Calculated from quotations in the Review of the River Plate, Prices prior to May, 1924, originally quoted on basis of price per head supplemented from 1916 by price per pound of dressed carcass weight. Calculations assume average dressed weight of 730 pounds or live weight of 1,269 pounds. Live-weight quotations per pound from May, 1924. Converted at average monthly rate of exchange as given in Federal Reserve Bulletins.

BEEF CATTLE, HOGS, SHEEP, HORSES, AND MULES

Bureau of Agricultural Economics. Prices of beef steers prior to January, 1922, compiled from the Chicago Drovers Journal Yearbook. Subsequent figures are the weighted average price of all grades of beef steers sold out of first hands at Chicago. Veal calf prices prior to January, 1919, compiled from Chicago Drovers Journal Yearbook, and later from data of the livestock and meat reporting service of the bureau.

¹ Western steers not included.

Bureau of Agricultural Economics. Compiled from official sources and cabled reports from agricultural commissioners abroad.

¹ Including municipal and private slaughterhouses, the figures were as follows in thousands—averages, pre-war, 3,272; 1921-1925, 5,961. The numbers killed in freezing and chilling plants alone were as follows in thousands—1925, 3,333; 1926, 3,060; 1927, 3,234; 1928, 2,830.

² Slaughtering in freezing and chilling plants alone were as follows in thousands—1925, 651; 1926, 714; 1927, 695; 1928, 697.

³ For years ended March 31 following.

⁴ Average for five years immediately preceding war if available, otherwise for any year or years within that period, unless otherwise stated.

⁵ Excluding farm slaughter which averaged only 7,493 for the 10 years 1917-1926.

⁶ Preliminary estimate.

Bureau of Agricultural Economics. Later revised figures for 1928, 1929, and preliminary 1930 may be found in February, 1930, Crops and Markets.

¹ Prior to 1900 estimates for each 10-year period represent an index of annual changes applied to census as based on first report after census data were available; 1900-1919 are tentative revised estimates of the Bureau of Agricultural Economics as first published in 1927 Yearbook.

² Series for 1867-1899 are values of all hogs as reported. Data for 1900-1925 are an old series for all hogs as reported, adjusted on basis average relationship between the new and old series from 1926 to 1928. Old series was shown in 1928 Yearbook. Conversion factor was 1.057 (base was old series). Data for 1926-1929 are a new series, referred to above, of average of values by age and sex classification weighted by numbers in each class.

³ Data for swine on farms and elsewhere as of Jan. 1 prior to 1900 estimated by the Bureau of Animal Industry. Census figures prior to 1920 were adjusted to a Jan. 1 basis and to include all ages and all animals in towns, villages, and ranges, as well as on farms. For methods see Department Circular 241. Figures from 1900-1929 are the estimates of the Bureau of Agricultural Economics of swine on farms plus an estimate made by the Bureau of Animal Industry of swine in towns and villages.

⁴ Italic figures are from the census. Figures for census years 1890 and 1900 exclude estimate of unenumerated swine on ranges as follows: 1890, 2,093,970; 1900, 17,276. Census dates were June 1 from 1840 to 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925.

⁵ Original estimate of the Bureau of Agricultural Economics.

⁶ Preliminary.

| Estimated world total including Russia ⁵ | | 260,700 | 260,000 | | | | |

Bureau of Agricultural Economics. Official estimates and International Institute of Agriculture unless otherwise stated.

¹ Average for 5-year period if available, otherwise for any year or years within that period unless otherwise stated. In countries having changed boundaries, the figures are estimated for 1 year only for numbers within present boundaries. For the pre-war average the years immediately preceding the war have been used.

² Year 1902.

³ Census figure.

⁴ Incomplete.

⁵ These totals include interpolations for a few countries not reporting each year, and rough estimates for some others.

⁶ Year 1915.

⁷ Year 1920.

⁸ Year 1908.

⁹ Estimate reported as of December have been considered as of January 1 of the following year, i. e., the figure for the number of hogs in France as of December 31, 1925, has been put in the 1926 column.

¹⁰ June, 1914.

¹¹ Year 1922.

¹² Number in rural communities.

¹³ September.

¹⁴ Year 1906.

¹⁵ Unofficial.

¹⁶ Years 1916, 1923 from the Soviet Union Review, April, 1928, p. 52. Years 1924-1927, Statistical Review, October, 1928. Years 1928 and 1929 from Economic Life, August 14, 1929.

¹⁷ Years 1916.

¹⁸ Number in towns assumed to be same as in 1927, i. e., 22,000, and added in for purposes of comparison with preceding years.

¹⁹ Comparable totals for the number of countries indicated.

Bureau of Agricultural Economics. Compiled from data of the livestock and meat reporting service of the bureau.

¹ Complete information for 1915 and 1916, particularly on disposition of stock, is not obtainable from many of these markets.

NOTE.—A table similar to Table 378, 1928 Yearbook, receipts, local slaughter, and stocker and feeder shipments of hogs, is omitted.

Bureau of Agricultural Economics. Figures for 1909–1919 compiled from Chicago Drovers Journal Yearbook; subsequent figures from data of the livestock and meat reporting service of the bureau, which are the weighted average of packer and shipper purchases. Data for 1900–1908 are available in 1924 Yearbook, p. 906, Table 506.

¹ Simple average.

Bureau of Agricultural Economics. Figures prior to 1920 are general average hog prices as published in the Chicago Drovers Journal Yearbook; subsequent figures compiled from reports of packer and shipper purchases; such purchases do not include pigs, boars, stags, extremely rough sows, or cripples.

TABLE 382.—Hogs: Average price per 100 pounds at Chicago and Omaha, by months, July, 1927, to December, 1929

| Year and month | Chicago | | | | | | Omaha | | | | | |
|------------------------|---|--|---|---|---|---------------------------------------|---|--|---|---|---|---------------------------------------|
| | Butcher, bacon, and shipper hogs | | | | | | Butcher, bacon, and shipper hogs | | | | | |
| | Heavy weight, 250 to 350 pounds, medium to choice | Medium weight, 200 to 250 pounds, medium to choice | Light weight, 160 to 200 pounds, medium to choice | Light lights, 130 to 160 pounds, medium to choice | Packing sows, rough and smooth, all weights | Average cost, packer and shipper hogs | Heavy weight, 250 to 350 pounds, medium to choice | Medium weight, 200 to 250 pounds, medium to choice | Light weight, 160 to 200 pounds, medium to choice | Packing sows, rough and smooth, all weights | Feeder and stocker pigs, 70 to 130 pounds, medium to choice | Average cost, packer and shipper hogs |

Bureau of Agricultural Economics. Compiled from official sources and cabled reports from agricultural commissioners abroad.

¹ For years ended May 31 following.

² Average for 5 years immediately preceding war period if available, otherwise for any year or years within that period unless otherwise stated. In countries having changed boundaries, the figures are estimates for 1 year only for numbers within present boundaries.

³ Not available for present boundaries. For former boundaries, the numbers slaughtered are as follows in thousands—1914, 10,441; 1915, 13,293; 1916, 6,548; 1917, 5,795; 1918, 2,430.

Bureau of Agricultural Economics. Later revised figures for 1928, 1929, and preliminary for 1930 may be found in February, 1930, Crops and Markets.

¹ Prior to 1900 estimates for each 10-year period represent an index of annual changes applied to census as base on first report after census data were available. Figures 1900-1919 are tentative revised estimates of the Bureau of Agricultural Economics as first published in 1927 Yearbook.

² Data for sheep on farms and elsewhere as of Jan. 1, prior to 1900, estimated by the Bureau of Animal Industry. Census figures prior to 1920 were adjusted to a Jan. 1 basis and to include all ages and all animals in towns, villages, and ranges, as well as on farms. For methods see Department Circular 241. Figures from 1900-1929 are the estimates of the Bureau of Agricultural Economics of sheep on farms plus an estimate made by the Bureau of Animal Industry of sheep in towns and villages.

³ Italic figures are from the census. Figures for census years 1860, 1880, and 1890 exclude an estimated number of unenumerated sheep on ranges, as follows: 1860, 1,505,810; 1880, 7,000,000; 1890, 4,940,948. Censuses prior to 1900 excluded lambs. Census dates were June 1 from 1840 to 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925.

⁴ Original estimate of the Bureau of Agricultural Economics.

⁵ Preliminary.

| Estimated world total, including Russia. ⁴ | | 687,100 | 633,400 | | | | |

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture unless otherwise stated. Figures in parentheses are interpolated.

¹ Average for 5-year period if available, otherwise for any year or years within this period except as otherwise stated. In countries having changed boundaries the pre-war figures are estimates for 1 year only of numbers within present boundaries. For the pre-war average the years immediately preceding the war have been used.

² Year 1902.

³ Census figures.

⁴ Incomplete.

⁵ These totals include countries with less than 100,000 interpolations for a few countries not reporting each year and rough estimates for some others.

⁶ Year 1916.

⁷ Unofficial.

⁸ Estimates for countries reporting as of Dec. 31, are considered as of Jan. 1 of the following year, i. e., figures for number of sheep in France as of Dec. 31, 1925, have been placed in 1926 column.

⁹ Year 1925.

¹⁰ Year 1920.

¹¹ Year 1908.

¹² Year 1915.

¹³ June, 1914.

¹⁴ December, 1922.

¹⁵ For Argentine average of range from 36,000,000 to 40,000,000, for Austria average of range from 300,000 to 325,000, and for China average of range from 25,000,000 to 45,000,000.

¹⁶ In rural communities only.

¹⁷ 1906.

¹⁸ Sheep and goats 140,689,000 against 140,102,000 in 1928. Sheep alone in 1928 given as 123,810,000. Economic Life, Aug. 14, 1929.

¹⁹ Goats included.

²⁰ Number in towns assumed to be same as in 1927, i. e., 162,000 and added for purposes of comparison with preceding years.

²¹ Comparable totals for number of countries indicated. Russia excluded from totals pre-war to 1929 as no 1929 figures are available for sheep alone.

Bureau of Agricultural Economics. Revised figures for 1928 and 1929 may be found in March, 1930, Crops and Markets.

¹ In States where sheep are shorn twice a year, principally Texas and California, this figure covers wool per head of sheep shorn and not weight per fleeces.

² Includes some fleeces taken at commercial feeding plants. California figure includes some fleeces taken from early lambs.

³ Preliminary.

TABLE 415.—*Stocks of wool, tops, and noils held by dealers and manufacturers in United States, 1925-1929*¹

| Date | Held by dealers | | | | | Held by manufacturers | | | | |

Bureau of Agricultural Economics. Compiled from wool stock reports issued quarterly by the Bureau of Agricultural Economics and the Bureau of the Census. Stocks held by the Government are not included.

¹ Not including estimates for firms not reporting nor wool actually reported but for which no grade was stated. Beginning with 1922 estimates for firms not reporting were discontinued. The information in this table is, therefore, not complete as some firms do not report.

NOTE.—A table similar to Table 420, 1928 Yearbook, wool used in manufactures, is omitted.

Bureau of Agricultural Economics. Includes wool shorn in the spring in the Northern Hemisphere and that shorn in the last few months of the same calendar year in the Southern Hemisphere. For complete reference to sources, unless given below, see Foreign Crops and Markets, Feb. 11, 1929.

¹ Average for years 1909-1913 whenever available, otherwise for any year or years within or near this period for which estimates are available.

² Based on official estimates of sheep numbers at date nearest shearing time.

³ Estimate furnished by International Institute of Agriculture.

⁴ Dalgety & Co.'s estimate.

⁵ Excluding pulled wool in the United States.

⁶ Totals subject to revision. Few countries publish official wool production figures. In the absence of official figures for most countries various estimates have been used. Some have been supplied by Government representatives abroad; others are based on sheep numbers at the date nearest shearing time. For some principal exporting countries, exports alone, or exports, stocks, and domestic consumption have been used as representing production. In the case of some Asiatic countries rough commercial estimates have been used, while the figures of the United States Department of Commerce or the National Association of Wool Manufacturers have been used for some other countries.

⁷ Year 1916.

Bureau of Agricultural Economics. These data were obtained from prices given by Kreglinger and Fernau for the opening and closing of each series of the London wool sales. For months when no sales were held the figures are interpolations of nearest actual prices. Conversions at monthly average rate of exchange as given in Federal Reserve Bulletins to December, 1925, inclusive; subsequently at par.

Bureau of Agricultural Economics.

¹ Figures for 1923, 1924, and 1925 are revisions of department's estimates previously published.

² Most goats clipped twice a year. In Texas, kids are clipped in the fall of year of birth. Figures include both goats and kids clipped.

³ In States where goats are clipped twice a year figures include both spring and fall clip.

Bureau of Agricultural Economics. Later revised figures for 1928, 1929, and preliminary 1930 may be found in February 1930, Crops and Markets.

¹ Prior to 1920 estimates for each 10-year period represent an index of annual changes applied to the census as a base on first report after census data were available. Figures for 1920 to date are revised estimates of the Bureau of Agricultural Economics for numbers on Jan. 1.

² Values for 1867-1899 relate to "milk cows." Data for 1900-1925 are an old series of values of "milk cows" adjusted to relate to "milk cows and heifers, 2 years old and over" on basis of relationship between the 2 series from 1926 to 1928. Conversion factor was 0.955 (base is old series). Data for 1926-1929 are values relating to "milk cows and heifers 2 years old and over."

³ Data for dairy cattle, including young animals and bulls of that type on farms and elsewhere as of Jan. 1, estimated by the Bureau of Animal Industry. Census figures for milk and dairy cows were adjusted to a Jan. 1 basis and to include all ages and all animals in towns, villages, and ranges, as well as on farms. For methods see Department Circular 241. Revisions have been made by the Bureau of Animal Industry for 1900-1929.

⁴ Italic figures are from the census. Figures for census years 1850-1890 represent "milk cows"; 1900, "cows kept for milk 2 years and over"; 1910, "cows and heifers kept for milk, born before Jan. 1, 1909" (15½ months and over); 1920, "dairy cattle 2 years old and over kept mainly for milk production." For comparison with 1920 the number of dairy cows and heifers 2 years old and over on Jan. 1, 1910, has been estimated by the census as 17,125,471; 1925, number of cows milked. Census dates were June 1 from 1850 to 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925.

⁵ Beginning with 1920, heifers 1 to 2 years old being kept for milk cows were estimated as follows: 1920-1929, respectively, 4,418,000, 4,155,000, 3,968,000, 4,147,000, 4,137,000, 4,195,000, 3,923,000, 4,059,000, 4,201,000, 4,377,000.

⁶ Preliminary.

Bureau of Agricultural Economics. Compiled from reports from cold-storage establishments.

¹ Quantities given are net weight.

² The term "American cheese" is intended to cover only those varieties known as twins, flats, daisies, Cheddars, longhorns, and square prints. It does not, therefore, include all kinds of cheese made in America.

Bureau of Agricultural Economics. Prices 1910-1922 are averages of daily prices in New York Journal of Commerce, Price Current and Chicago Dairy Produce, Philadelphia Commercial List; average of weekly prices quoted in Boston Chamber of Commerce and Pacific Dairy Review. Beginning 1923, monthly prices from the Bureau of Labor Statistics, except San Francisco, which is from the Pacific Dairy Review. Earlier data are available in 1925 Yearbook, p. 1224, Table 636, and 1927 Yearbook, p. 1105.

¹ Year 1926 are prices as quoted by the San Francisco Mercantile Exchange in the Pacific Dairy Review not subject to discount.

² Beginning January, 1927, prices furnished by the Bureau of Agricultural Economics to the Pacific Dairy Review, for United States No. 1 extras.

Bureau of Agricultural Economics. This table supercedes Table No. 472 in the Yearbook of Agriculture, 1927; the value of total imports and exports has been given and the imports of "rubber and similar gums" have been deducted from "imports of forest products" and added to "reexports of agricultural." Also reexports of "rubber and similar gums" have been deducted from "reexports of forest products" and added to "reexports of agricultural."

¹ Does not include forest products.

¹ Excess of agricultural imports.

¹ Excess of exports

Bureau of Agricultural Economics. Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1927 and 1928.

In the statistics of foreign commerce of the United States, the Philippine Islands are treated as a foreign country.

The statistics of foreign commerce include the trade of the customs districts of Alaska, Hawaii, and Porto Rico with foreign countries, but do not include the trade of these Territories with the United States.

Bureau of Agricultural Economics. Compiled from Commerce and Navigation of the United States, 1900–1918, and Monthly Summary of Foreign Commerce, June issue, 1919–1929.

¹ Includes "Silk, raw or as reeled from cocoon," "Silk waste," and "Silk cocoons."

² Not separately classified.

³ Reported in value only.

⁴ 2-year average.

⁵ 3-year average.

⁶ Conversion factors used: Almonds, 30 per cent unshelled equals shelled. Peanuts, 3 pounds unshelled equals 2 pounds shelled. Walnuts, 42 per cent unshelled equals shelled.

⁷ Includes broken, or shredded, desiccated or prepared and copra.

⁸ Included with "All other nuts."

⁹ Beginning Sept. 22, 1922.

¹⁰ Beginning Jan. 1, 1924.

¹¹ July 1–Dec. 31, 1923.

Bureau of Agricultural Economics. Estimates of the crop-reporting board.

¹ Principal producing States.

² Pounds.

³ Includes total crop gathered, hogged off, and otherwise utilized, except where harvested for hay only.

⁴ Trees tapped.

⁵ Per tree.

⁶ The production of peaches shown includes some estimated quantities not harvested or not utilized as follows: 1927, 2,708,000 bushels; 1928, 3,917,000 bushels.

⁷ The production of grapes includes 142,000 tons not harvested in 1927; 153,000 tons not harvested in 1928.

⁸ Included in "Potatoes."

Bureau of Agricultural Economics. Estimated quantities produced, sold, and consumed in farm households times weighted annual prices. Cash income plus value of commodities consumed in farm households equals gross income. For feed and seed crops, horses and mules, values include sales by farmers in some States eventually bought by farmers in other States. These inter-farm sales tend to overstate the total income from farm production for the country as a whole.

TABLE 517.—*Wheat: Cost of production, by yield groups, 1928*

| Yield group (bushels per acre) | Reports | Average acres in wheat per farm | Average yield per acre | Gross cost per acre | | | | | | | Credit per acre (straw) | Net cost | | | |

Bureau of Agricultural Economics. From returns to mail inquiry sent to crop reporters. For figures for 1923, 1924, 1925, 1926, and 1927, see Agriculture Yearbooks, 1924, p. 1183; 1925, p. 1328; 1926, p. 1210; 1927, p. 1136; and 1928, p. 1041.

¹ Includes miscellaneous labor, irrigating and water, seed treatment, and material.

² Includes sacks and twine, crop insurance, use of implements, use of storage buildings, and overhead.

³ Winter-wheat belt as used here includes Kansas, Nebraska, Missouri, and Oklahoma.

⁴ Spring-wheat belt as used here includes western Minnesota, North Dakota, eastern South Dakota, and eastern Montana.

TABLE 518.—*Corn: Cost of production, by yield groups, 1928*

Bureau of Agricultural Economics. From returns to mail inquiry sent to crop reporters. For figures for 1923, 1924, 1925, 1926, and 1927, see *Agriculture Yearbooks, 1924*, p. 1135; 1925, p. 1332; 1926, p. 1213; 1927, p. 1133; and 1928, p. 1044.

¹ Includes miscellaneous labor, irrigating, and water.

² Includes sacks and twine, crop insurance, use of implements, use of storage buildings, and overhead.
³ Corn Belt as used here includes Indiana, Illinois, Iowa, western Ohio, southeast corner of South Dakota, eastern Nebraska, northeast corner of Kansas, and the northern three-fourths of Missouri.

Bureau of Agricultural Economics. From returns to mail inquiry sent to crop reporters.

¹ The average yield of lint cotton in the United States has been as follows: 1924, 157.4 pounds; 1925, 167.2 pounds; 1926, 182.6 pounds; 1927, 154.5 pounds; 1928, 152.9 pounds.² The average cost per pound for the yield groups which closely approximated the average yields for the United States are as follows: 1924, 18 cents; 1925, 18 cents; 1926, 15.5 cents; 1927, 17 cents; 1928, 17 cents. At least a part of the yearly variations in costs in some of the upper and lower yield groups may be due to the small number of reports, and to the relative number of reports received each year from various sections of the Cotton Belt.

Bureau of Agricultural Economics. From returns to mail inquiry sent to crop reporters. For figures for 1923, 1924, 1925, 1926, and 1927, see June issues of Monthly Supplement, Crops and Markets, 1924, p. 176; 1925, p. 180; 1926, p. 170; Crops and Markets, June issues, 1927; p. 202; 1928, p. 156.

¹ The States included in the geographical divisions are as follows: North Atlantic—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania. South Atlantic—Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida. East North Central—Ohio, Indiana, Illinois, Michigan, and Wisconsin. West North Central—Minnesota, Iowa, Missouri, Nebraska, Kansas, Oklahoma, and Arkansas. South Central—Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, and Arkansas. West Central—Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, Washington, Oregon, and California.

² Threshing for wheat and oats is included under harvesting.

³ Includes miscellaneous labor, irrigating and water, and seed treatment and material.

⁴ Sacks and twine, crop insurance, use of implements, use of storage buildings, and overhead.

Bureau of Agricultural Economics.

¹ These indexes are based on estimates of production for sale and for consumption in the farm home. Production fed to livestock or used for seed is not included. For example, instead of total production, only the amounts of corn and oats shipped out of county where grown and only a small percentage of the hay crops are included. The index of dairy products represent total milk production for all purposes. Production of meat animals is represented by total slaughter, including slaughter for farm use. Calendar-year production of livestock and livestock products are here compared with crop production of the same year. Each group index as well as the total is obtained by multiplying the yearly quantities by a 1919-1927 average farm price received by producers for each of the commodities, and the sum of these yearly values at average prices, divided by the corresponding average sum for the period 1919-1927, taken as 100. The following commodities included in the index contribute about 90 per cent of the gross income from agricultural production: Grains—wheat, corn, oats, barley, rye, buckwheat, kafir, rice; fruits and vegetables—grapes, apples, apricots, peaches, pears, cranberries, figs, grapefruit, lemons, olives, oranges, potatoes, sweetpotatoes, dry edible beans; truck crops—asparagus, snap beans, cabbage, cantaloupes, cauliflower, celery, cucumbers, lettuce, onions, peas, spinach, strawberries, tomatoes, watermelons; meat animals—cattle, calves, sheep, lambs, hogs; dairy products—milk, total production; poultry products—chickens and eggs; cotton and cottonseed; total includes also tobacco, wool, and hay.

TABLE 525.—*Current value of capital rates earned on agricultural and nonagricultural capital, and income per farm available for capital, labor, and management, 1919-1928*

Bureau of Agricultural Economics.

¹ As of Jan. 1 in the period indicated. Values include land, buildings (dwellings and other), livestock, implements, machinery, motor vehicles, and an allowance for cash working capital.

² Total capital investment less property rented from nonoperators and debts owed to nonoperators.

³ Net income available for operators' capital, labor, and management calculated on the basis of the number of farmers interpolated between 6,448,000 in 1920 and 6,372,000 in 1925.

⁴ After allowing 4½ per cent on operators' net capital investment.

TABLE 526.—*Gross value of farm production and gross income, 1919-1928*

| Year beginning July | Gross value of all farm production ¹ | Deductions for products fed, used for seed, and waste ² | Gross income from farm production | | | | | | |

Bureau of Agricultural Economics.

¹ These gross values of all farm production are here evaluated in terms of crop year (practically July-June) production and weighted average farm prices.² These deductions, to obtain gross income, cover portions of crops and dairy products fed to livestock, used for seed in further crop production, and waste. For the industry as a whole these deductions constitute raw materials, the income from which is derived from the finished products sold or consumed in the farm home.TABLE 527.—*Distribution of gross income from agricultural production, 1919-1928*

| Year beginning July | Gross income | Value of food and fuel consumed on farms | Cash income from sales | Distribution of cash income | | | | | |
|---------------------|--------------------------|--|--------------------------|-----------------------------------|--------------------------|------------------------------------|---|-----------------------------------|---|
| | | | | Wages to hired labor ¹ | Operating costs | Taxes on operator-owned investment | Rent on property rented from nonoperators | Interest on debts to nonoperators | Balance available for living expenses, etc. |
| | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> | <i>1,000,000 dollars</i> |

Bureau of Agricultural Economics. Prices of farm production received by producers collected monthly from a list of about 12,000 special price reporters. This list is made up almost entirely of country-town dealers, elevator managers, buyers, and merchants.

The commodities by groups are as follows: (Grains—wheat, corn, oats, barley, rye, kafir; fruits and vegetables—apples, oranges, grapefruit, potatoes, sweet potatoes, beans, onions, cabbage; meat animals—beef cattle, calves, hogs, sheep, lambs; dairy products—butter (represents butter, butterfat, and cream), milk; poultry products—chickens, eggs; cotton and cottonseed; all groups includes also horses (represents horses and mules), hay, flax, tobacco, and wool.

^a Kafir, onions, and cabbage omitted.

Bureau of Agricultural Economics. Compiled from prices reported to the Department of Agriculture by retail dealers throughout the United States. The index numbers include only commodities bought by farmers; the commodities being weighted according to purchases reported by actual farmers in farm management and rural-life studies from 1920 to 1925.

¹ 1912-1914=100.

² Includes food, clothing, household operating expenses, furniture and furnishings, and building material for house.

³ 1914=100.

GENERAL NOTE.—Tables similar to Tables 504-507, 1927 Yearbook, pertaining to farm business and farm family living in certain localities, and Table 508.—Average prevailing farm wage rates, by geographic divisions, are omitted.

Bureau of Agricultural Economics.

¹ Yearly averages are from reports by crop reporters, giving average wages for the year in their localities.

² This column has significance only as an essential step in computing the wage index.

³ Years 1866 to 1878 in gold.

⁴ 1877 or 1878, 1878 or 1879 (combined).

⁵ Weighted average of quarterly reports, April (weight 1), July (weight 5), October (weight 5), and January of the following year (weight 1).

Bureau of Agricultural Economics. Based on values as reported by crop reporters. Values as reported by the census for 1910, 1920, and 1925 will be found in Table 511 of the 1927 Yearbook.

¹ All farm land with improvements, as of Mar. 1. Owing to rounding of figures, 1912-1914 will not always equal exactly 100 per cent.

NOTE.—A table similar to Table 511, 1927 Yearbook, census figures on value of farm lands and buildings, is omitted.

TABLE 541.—Number of farms per 1,000 changing ownership by various methods, by States and geographic divisions, 12 months ended March 15, 1926—1929

Bureau of Agricultural Economics. Based upon returns from crop reporters. Revised figures. Supersedes Table 537, 1928 Yearbook.

1 Including contracts to purchase (but not options).

2 Including loss of title by default of contract, sales to avoid foreclosure, and surrender of title or other transfers to avoid foreclosure.

3 Including all other sales in settlement of estates.

4 Excluding administrators' and executors' sales in 1926.

TABLE 542.—*Bankruptcies among farmers and per cent the farmer cases are of all bankruptcies, years ended June 30, 1925-1929*

Bureau of Agricultural Economics.

1 Tenants owning none of the land in their farms.

2 Land in tenant farms plus rented land in part owner farms.

3 Rented land in part-owner farms for 1900 and 1920 on basis of succeeding censuses.

4 Percentages omitted for States which produced less than one-tenth of 1 per cent (0.001) of the United States crop.

TABLE 545.—*Farm mortgage debt: Total and by tenure of land, January 1, 1925, and January 1, 1928*

Bureau of Agricultural Economics. These relatives are based on the average of the monthly rates in effect during the crop year. Rates in effect in 1913=100. For points of origin and destination, see Yearbook, 1926, pp. 1248-1249.

¹ Based on rates in effect to Dec. 31, 1928.

² Index for spring, western, and winter wheat weighted respectively 2, 1, and 5. Weight based on average production, 1923-1927.

GENERAL NOTE.—Tables similar to Table 523, 1927 Yearbook, index numbers of cotton freight rates, by origin and destination, and Table 525, ocean freight rates, are omitted.

Bureau of Agricultural Economics. Compiled from annual reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce and the Bureau of Mines.

¹ Subject to revision.

² By-product of coke ovens. Production from other sources (coal gas, bone carbonizing, etc.) accounted for less than 5 per cent of the total production for these years.

³ General imports.

⁴ Fertilizer establishments only.

⁵ Bulk superphosphate and superphosphate for mixed fertilizers.

⁶ Bulk superphosphate.

⁷ Quantity sold as superphosphate or used in manufactured goods sold.

⁸ Includes ashes (wood), beet root, other potash bearing substances (alunite, leucite, etc.) used for fertilizer.

Bureau of Agricultural Economics. Figures for cotton States based on sales of fertilizer tags as noted. Data for States other than cotton States compiled from reports of the National Fertilizer Association quoting figures from surveys, private estimates, and State records.

¹ Based on sales of fertilizer tags. Figures for earlier years appear in previous issues of the Yearbook.

² To July 1.

³ To June 1.

⁴ To May 1.

⁵ Calendar year.

⁶ Not separately reported except for North Carolina and Mississippi.

Bureau of Agricultural Economics. Compiled from Statistique de la Production de la Soie, Silk Merchants Union, Lyon, France.

¹ Includes Hungary, Czechoslovakia, Yugoslavia, Rumania, Bulgaria, Greece, Salonika, Adrianople Crete, the Caucasus, Turkestan, Central Asia, and Persia.

² Previous to 1923 only exports from Yokohama are included.

³ For years 1911-1913.

Bureau of Agricultural Economics. Compiled from December issues of "Monthly Summary of Foreign Commerce of United States" prior to 1918. Subsequent years are from annual issues of Commerce and Navigation of United States Department of Commerce. Production figures are from "Yearbook of the Department of Commerce." Prices are from Bulletins of the United States Bureau of Labor Statistics.

¹ Net imports are imports minus reexports, years 1911 through 1924; and imports minus exports and reexports, 1925-1928.

² The count indicates the number of deniers or one-half decigram units, in weight, of a standard length of 450 meters. Since the standard is based on an arbitrary fixed length and a variable weight, the finer the yarn the smaller the count; 150 denier count, a size commonly used, is fine and 300 denier count is coarse.

Bureau of Public Roads.

¹ The term stage construction refers to additional work done on projects previously improved with Federal aid. In general, such additional work, consists of the construction of a surface of higher type than was provided in the initial improvement.

TABLE 572.—*Mileage of roads in State highway systems at end of 1928, as reported by State highway departments*

| State | Total system mileage | Earth, non-surfaced | | Surfaced roads, by types | | | | | | | | |
|---------------------|----------------------|---------------------|-------------------|--------------------------|--------------------|---------------------|--|--------------------|---------------|---------------------|--------------------------|-----------------|
| | | Unimproved | Improved to grade | Total surfaced mileage | Sand-clay, topsoil | Gravel, chert, etc. | Waterbound macadam (treated and untreated) | Bituminous macadam | Sheet asphalt | Bituminous concrete | Portland cement concrete | Brick and block |
| Alabama..... | 5,590 | 2,450 | 400 | 2,740 | 800 | 1,468 | 46 | 63 | 6 | 118 | 239 | |

Bureau of Biological Survey.

¹ Includes amounts received from combined hunting and fishing licenses, but not from licenses to fish only.

² No resident license required.

³ Combined hunting and fishing license.

⁴ Totals are exclusive of Mississippi, for which figures are not available, and include figures for combined hunting and fishing licenses, which for many States can not be separated, many such licenses being taken out by anglers only.

TABLE 586.—National forest areas, by districts, June 30, 1929

| District | Name | District headquarters | Gross area | Alienated lands | Net area |
|----------|-------------------------------|---------------------------|--------------|-----------------|--------------|
| | | | <i>Acres</i> | <i>Acres</i> | <i>Acres</i> |
| 1 | Northern district..... | Missoula, Mont..... | 26,781,219 | 3,966,338 | 22,814,881 |
| 2 | Rocky Mountain district..... | Denver, Colo..... | 20,967,083 | 1,784,282 | 19,172,801 |
| 3 | Southwestern district..... | Albuquerque, N. Mex..... | 21,458,169 | 2,223,123 | 19,235,046 |
| 4 | Intermountain district..... | Ogden, Utah..... | 30,685,614 | 1,177,196 | 29,508,418 |
| 5 | California district..... | San Francisco, Calif..... | 24,149,650 | 4,950,019 | 19,199,631 |
| 6 | North Pacific district..... | Portland, Oreg..... | 26,847,201 | 3,865,155 | 22,982,046 |

| 8 | Alaska district..... | Juneau, Alaska..... | 21,397,515 | 51,590 | 21,345,925 |
| 9 | Lake States district..... | Milwaukee, Wis..... | 2,555,808 | 1,253,082 | 1,302,726 |
| | Total of the 9 districts..... | | 184,564,953 | 24,814,433 | 159,750,520 |

DISTRICT HEADQUARTERS

DISTRICT 1.—Northern District: Office, Federal Building, Missoula, Mont. Embracing Montana, northeastern Washington, northern Idaho, and northwestern South Dakota.

DISTRICT 2.—Rocky Mountain District: Office, Federal Building, Denver, Colo. Embracing Colorado, Wyoming, South Dakota, Nebraska, Oklahoma, and Illinois.

DISTRICT 3.—Southwestern District: Office, Gas and Electric Building, Albuquerque, N. Mex. Embracing Arizona and New Mexico.

DISTRICT 4.—Intermountain District: Office, Forest Service Building, Ogden, Utah. Embracing Utah, southern Idaho, western Wyoming, Nevada, and northwestern Arizona.

DISTRICT 5.—California District: Office, Ferry Building, San Francisco, Calif. Embracing California and southwestern Nevada.

DISTRICT 6.—North Pacific District: Office, Post Office Building, Portland, Oreg. Embracing Washington and Oregon.

DISTRICT 7.—Eastern District: Office, Atlantic Building, Washington, D. C. Embracing Alabama, Arkansas, Florida, Georgia, Maine, New Hampshire, North Carolina, Pennsylvania, Porto Rico, South Carolina, Tennessee, Virginia, and West Virginia.

DISTRICT 8.—Alaska District: Office, Goldstein Building, Juneau, Alaska. Located in Alaska.

DISTRICT 9.—Lake States District: Office, Customs Service Building, Milwaukee, Wis. Embracing Michigan and Minnesota.

NATIONAL MONUMENTS

The following national monuments situated within national forests and administered by the Department of Agriculture have been created under the act of June 8, 1906 (34 Stat. 225), for the preservation of objects of historic or scientific interest:

| Name | National forest | State | Area | Latest change in boundary |
|---------------------------|-----------------|-------------------|--------------|---------------------------|
| | | | <i>Acres</i> | |
| Bandelier..... | Santa Fe..... | New Mexico..... | 22,075 | Feb. 11, 1916 |
| Chiricahua..... | Coronado..... | Arizona..... | 4,480 | Apr. 18, 1924 |
| Devil Postpile..... | Sierra..... | California..... | 800 | July 6, 1911 |
| Gila Cliff Dwellings..... | Gila..... | New Mexico..... | 160 | Nov. 16, 1907 |
| Holy Cross..... | Holy Cross..... | Colorado..... | 1,392 | May 11, 1929 |
| Jewel Cave..... | Harney..... | South Dakota..... | 1,280 | Feb. 7, 1908 |
| Lava Beds..... | Modoc..... | California..... | 45,967 | Nov. 21, 1925 |
| Lehman Caves..... | Nevada..... | Nevada..... | 593 | Jan. 24, 1922 |
| Mount Olympus..... | Olympic..... | Washington..... | 298,730 | Jan. 7, 1929 |
| Old Kasaan..... | Tongass..... | Alaska..... | 38 | Oct. 25, 1916 |
| Oregon Caves..... | Siskiyou..... | Oregon..... | 480 | July 12, 1909 |
| Timpanogos Cave..... | Wasatch..... | Utah..... | 250 | Oct. 14, 1922 |
| Tonto..... | Tonto..... | Arizona..... | 640 | Dec. 19, 1907 |
| Walnut Canyon..... | Cocconino..... | do..... | 960 | Nov. 30, 1915 |
| Wheeler..... | Cochetopa..... | Colorado..... | 300 | Dec. 7, 1908 |
| | Rio Grande..... | | | |
| Total area..... | | | 378,145 | |

NATIONAL GAME REFUGES

The following national refuges situated wholly or in part within national forests have been designated under special acts of Congress for the protection of game:

| Name | National forest | State | Area | Latest change in boundary |
|--------------------------------------|-------------------|----------------|------------------------|---------------------------|
| Cherokee National Game Refuge No. 1. | Cherokee | Tennessee | <i>Acres</i> 30,000 | Aug. 5, 1924 |
| Cherokee National Game Refuge No. 2. | do. | Georgia | 14,000 | Do. |
| Custer State Park Game Sanctuary. | Harney | South Dakota | 44,840 | Jan. 14, 1929 |
| Grand Canyon | Tusayan Kaibab | Arizona | 792,163 | Feb. 26, 1919 |
| Ozark National Game Refuge No. 1. | Ozark | Arkansas | 8,420 | Apr. 26, 1926 |
| Ozark National Game Refuge No. 2. | do. | do. | 5,300 | Do. |
| Ozark National Game Refuge No. 3. | do. | do. | 3,620 | Do. |
| Ozark National Game Refuge No. 4. | do. | do. | 4,160 | Do. |
| Pisgah | Pisgah | North Carolina | 98,381 | Oct. 17, 1916 |
| Sequoia | Sequoia | California | 16,300 | July 3, 1926 |
| Sheep Mountain | Medicine Bow | Wyoming | 28,318 | Aug. 8, 1924 |
| Wichita | Wichita | Oklahoma | 60,800 | June 2, 1905 |

The following national forests, or parts of national forests, established under section 9 of the Clarke-McNary Act of June 7, 1924 (43 Stat. 653), were on July 1, 1925, designated game refuges by the acting Secretaries of War and Agriculture:

| National forest | State | Area |
|---------------------------------------|--------------|-----------------------|
| Black Hills (Mende district) | South Dakota | <i>Acres</i> 5,548 |
| Manzano (Zuni district) | New Mexico | 45,423 |
| Medicine Bow (Pole Mountain district) | Wyoming | 56,132 |
| Michigan (Brady district) | Michigan | 2,680 |

RANGE RESERVES

The following reserves have been established by Executive order for use by the Forest Service in conducting studies of grazing and range management:

| Name | State | Area | Latest change in boundary |
|------------|------------|-------------------------|---------------------------|
| Jornada | New Mexico | <i>Acres</i> 193,686 | July 10, 1925 |
| Santa Rita | Arizona | 52,399 | Mar. 2, 1927 |
